## chatterbot-weather

---

A ChatterBot logic adapter that returns information about the weather. For more information about ChatterBot see <https://github.com/gunthercox/ChatterBot>

- Documentation: <https://chatterbot-weather.readthedocs.org>.

### 1.1 Installation

```
pip install chatterbot-weather
```

### 1.2 Example

```
from chatterbot import ChatBot

chatbot = ChatBot(
    'My Weather Bot',
    logic_adapters=[
        'chatterbot_weather.WeatherLogicAdapter'
    ]
)
```

### 1.3 Contributors Welcomed!

This package was originally created as a contribution to the main ChatterBot package. It was converted to a optional module in order to preserve the code quality of the main project. This weather adapter for ChatterBot works, but could benefit from improvements in several areas.

- Improved documentation with descriptions and information about the functions and structure of the adapter
- Additional support for other weather APIs
- Support for a wider range of questions about the weather (current, future, specific dates, etc.)

---

## Installation

---

### 2.1 Stable release

To install chatterbot-weather, run this command in your terminal:

```
$ pip install chatterbot-weather
```

If you don't have `pip` installed, this [Python installation guide](#) can guide you through the process.

### 2.2 From sources

The sources for chatterbot-weather can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/gunthercox/chatterbot-weather
```

Or download the [tarball](#):

```
$ curl -OL https://github.com/gunthercox/chatterbot-weather/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

---

### Usage

---

To use chatterbot-weather in a project:

```
import chatterbot-weather
```

---

## Contributing

---

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

### 4.1 Types of Contributions

#### 4.1.1 Report Bugs

Report bugs at <https://github.com/gunthercox/chatterbot-weather/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

#### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

#### 4.1.4 Write Documentation

chatterbot-weather could always use more documentation, whether as part of the official chatterbot-weather docs, in docstrings, or even on the web in blog posts, articles, and such.

#### 4.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/gunthercox/chatterbot-weather/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 4.2 Get Started!

Ready to contribute? Here's how to set up *chatterbot-weather* for local development.

1. Fork the *chatterbot-weather* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/chatterbot-weather.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv chatterbot-weather
$ cd chatterbot-weather/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 chatterbot-weather tests
$ python setup.py test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.6, 2.7, 3.3, 3.4 and 3.5, and for PyPy. Check [https://travis-ci.org/gunthercox/chatterbot-weather/pull\\_requests](https://travis-ci.org/gunthercox/chatterbot-weather/pull_requests) and make sure that the tests pass for all supported Python versions.

## 4.4 Tips

To run a subset of tests:

```
$ python -m unittest tests.test_chatterbot-weather
```

---

**Credits**

---

## 5.1 Development Lead

- Gunther Cox <[gunthercx@gmail.com](mailto:gunthercx@gmail.com)>

## 5.2 Contributors

None yet. Why not be the first?

---

## History

---

### 6.1 0.1.0 (2016-05-12)

- First release on PyPI.

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`
